Legislative Assembly of Alberta - Alberta Legislature Library

WHAT IS SCI?

The Science of Creative Intelligence (SCI) is the systematic study of the nature, origin, range and growth of the Creative Process throughout all of nature.

The Science is based on the fact that there exists in every human being a source of unlimited intelligence, energy, and happiness. This source can be easily and systematically drawn upon by everyone for spontaneous use in everyday life.

Like every science therefore, SCI is founded not only in academic study but also in practice: regular experiential contact with the source of creative intelligence, through the practical aspect of SCI.

WHAT IS THE PRACTICAL ASPECT OF SCI?

The practical aspect of SCI is a unique, easily learned mental technique for giving very deep rest in the body while the mind stays alert. Everyone experiences the need for rest. Sleep is the technique for eliminating daily fatigue. The much deeper rest (about twice as deep as during deepest sleep) of the practice of SCI allows the body to dissolve and eliminate the deep-rooted stresses and strains of life. This has been scientifically verified.

The practical aspect of SCI is popularly known as Transcendental Meditation (TM). It is compatible with any religion, life style, faith, philosophy or culture. Currently there are over 5500 Albertans using this technique, and 50 trained teachers in the province.

WHAT IS THE WORLD PLAN?

The World Plan is a plan formulated in 1972 by Maharishi Mahesh Yogi to bring the Science of Creative Intelligence to all the world's people. An International University (Maharishi International Academy) has already been established. A total of 3600 University residential training centres are to be located throughout the world.

Each Centre will serve one million people. Eventually, one trained teacher will be avilable per one thousand people so that each individual will be able to benefit personally from SCI through the inclusion of SCI in school, university, business, government, hospital, and prison programs.

In order to facilitate the rapid implementation of the World Plan, governments in all parts of the world are being approached during 1973 to enlist their active support for the program.

WHAT IS THE ALBERTA PLAN?

The Alberta Plan is structured to make SCI available to all of Alberta's 1.6 million citizens. To ensure this goal the Plan calls for two residential Centres to train and maintain a provincial staff of 1600 teachers. This will provide one teacher per thousand population.

To enable every Albertan to benefit personally from this knowledge, it is planned that SCI will be made available to every citizen through schools, universities, businesses, civil services, hospitals, and prisons throughout the province.

The implementation of the Plan will have far-reaching effects as briefly indicated below.

HOW WE (THROUGH SCI) CAN ASSIST THE ALBERTA GOVERNMENT.

The motives of the government and the teachers of SCI are identical - we each wish to assist every Albertan to live life to his or her full potential.

SPECIFICALLY, SCI WILL:

1. Increase the happiness, productivity, and general well being of all Albertans.
2. Reduce crime and discontent by improving social behavior, because practitioners of SCI become more aware of and considerate of others, as stress is released.
3. Improve health by the elimination of stress related or psychosomatic diseases.
4. Increase the individual's learning ability by increasing his or her use of mental potential.
5. Assist and speed rehabilitation of the mentally ill.
6. Assist in the rapid elimination of drug and alcohol abuse.

WE REQUEST ONLY THE OPPORTUNITY OF PROVING THESE CLAIMS!

HOW THE ALBERTA GOVERNMENT CAN HELP US TO HELP ALBERTANS NOW.

1. Make available student aid, under the terms of the Student Finance Act to enable sufficient Albertans to become teachers of SCI as quickly as possible. Approximate total cost per teacher is $1200 dollars for a 14 week course.

2. Approve SCI as an accredited academic option for interested schools and universities in the province.

3. Provide a publicity grant of 40,000 dollars, to ensure that all Albertans are informed of the benefits and availability of SCI.

4. Approve and sponsor an SCI course in the Civil Service. The cost per individual would be 200 dollars with the individual paying 15%. The cost to the government for instructing 500 people would be 85,000 dollars. The program is a twenty lecture color video course specifically prepared for Civil Service personnel by MIU Faculty Staff.

5. Sponsor a drug and alcohol rehabilitation program in one of the existing facilities, at a cost of 400 dollars per patient instructed. This program necessitates the training of some staff members at a cost of 200 dollars per person. Cost for this program is 60,000 dollars for a one year trial period.

6. Sponsor a rehabilitation program in one of Alberta's Correctional Institutes (the Calgary Correctional Institute is suggested since Warden Jackson has already expressed his public approval and support). This program would cost 400 dollars per inmate. In addition, this program necessitates the training of some staff members at a cost of 200 dollars per person. Total cost for this program is 60,000 dollars for a one year trial period.

7. Sponsor a rehabilitation program in one of Alberta's Mental Hospitals. This program would cost 400 dollars per patient and would necessitate training of some staff members in the hospital at 200 dollars per person. Total cost for this program is 60,000 dollars for a one year trial period.

When this government introduces the above programs, this province will shine as one of the greatest positive forces in man's history. There is no greater gift a government can give it's people than the ability to live and enjoy life in the most fulfilling way possible, and this can be easily accomplished by allowing every individual the opportunity to fully develop his or her creative potential, through the Science of Creative Intelligence.
